#### 2. センターマスタ通信仕様

2.1. 通信メッセージフォーマット 以下に通信メッセージフォーマットを示す。

#### 2.1.1. 共通

通信メッセージの通信プロトコルは HTTP とする。データ長は可変長。 ただしセンタメッセージ(C\_02\_IND)は TSC の Push サーバを利用する想定のため、MQTT(19PFver3 では qRPC)で通信を行う。  $\Delta 1$ 

#### 2.1.1.1. 接続 URL

#### (1) OTA センタ

OTA センタへの接続は TSC 認証 GW を経由する。 FQDN は CCOM 端末設定依頼書(19PFver3 では HUCOM 端末設定依頼書)を参照とし、 FQDN 以降のディレクトリについては別紙「通信一覧及び HTTP 情報一覧」に定義する。  $\Delta$ 1

#### 表 2-1 Path フォーマット

項目	内容
Path URL	https://{FQDN for OTA}/{directory}

#### (2) CDN

OTA センタから大容量データを通信する際には、CDN を活用する。FQDN は CCOM 端末設定依頼書 (19PFver3 では HUCOM 端末設定依頼書)を参照とし、FQDN 以降のディレクトリについては別紙「通信一覧及び HTTP 情報一覧」に定義する。  $\triangle$ 1

#### 表 2-2 CDN の Path フォーマット

項目	内容
Path URL	https://{FQDN for CDN}/{directory}

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書				
OTA Software Update 4.0			otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a	

#### 2.1.1.2. HTTP フォーマット

下記に車両と OTA センタの通信で必要となる HTTP フォーマットを示す。なお、詳細は CCOM 通信 仕様 (19PFver3 では HUCOM 通信仕様)を参照すること。  $\Delta$ 1

表 2-3 HTTP フォーマット(共通)

入出力		項目	設定値	説明
共通	ステータスライ ン	HTTP バージョン	HTTP/2.0	
車両	ステータスライ ン	HTTP メソッド	POST/GET/PUT	
センタ	HTTP ヘッダ	Host	サーバホスト名	FQDN を記載 ※1
		Content-Type	application/json	メッセージボディのコンテンツ種別 ※1
		User-Agent	情報管理キー	CCOM 仕様準拠 (19PFver3 では HUCOM 仕様準 拠) Δ1
		x-vin	VIN	CCOM 仕様準拠 (19PFver3 では HUCOM 仕様準 拠) Δ1
		DATE	日付	CCOM 仕様準拠 (19PFver3 では HUCOM 仕様準 拠) Δ1
		Content-Length	HTTP ボディのサイズ(バイト長)	GET の場合不要 ※1
		Accept-Encoding	gzip	CCOM 仕様準拠 (19PFver3 では HUCOM 仕様準 拠) △1
		Content-Encoding	gzip	リクエストボディサイズが、2KB 以上 のみ(CCOM 仕様準拠(19PFver3 では HUCOM 仕様準拠)) △1
	HTTP ボディ		各メッセージの仕様に従った json 形式	
センタ	ステータスライ ン	HTTP ステータスコード	センタ処理成功: 200 HTTP エラー: (200 以外)	2.2.1 参照
車両	HTTP ヘッダ	Response-From Content-Type	HTTP ステータスコード識別 ID application/json	
	HTTP ボディ	71	各メッセージの仕様に従った json 形式	

※1: CDN 通信の場合、HTTP ヘッダは Host、Content-Type、Content-Length のみで良い

#### 2.1.1.3. ハッシュ/署名付与

マスタ ECU~センタへ、ハッシュ/署名を付与するフォーマットとして、複数のハッシュ/署名が格納できるような設計としている。これは、同じハッシュ化/署名対象に対して、ハッシュアルゴリズムが異なるハッシュ(例:

SHA256/SHA384)や暗号アルゴリズムが異なる署名(例: RSA/ECDSA)を格納する等、拡張性を見据えた I/F 仕様である。

署名対象は、以下の「"signed":」以降の括弧を含む太い文字部分である。

```
"xxx": {
    "signatures": [],
    "signed": {---}
```

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
OTA Software Update 4.0			otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a

#### 2.1.2. CAMPAIGN STATUS 通知(C\_01\_Req)

本メッセージは HTTP(POST)フォーマットで送信し、HTTP ボディ部は VsmDeviceEvents 型で以下にフォーマットを示す。

#### 表 2-4 VsmDeviceEvents フォーマット(共通)

項目	設定値	データ型	最小値	最大値	説明
signed	-	VsmDeviceEventsSigned 型	•	1	表 2-5 VsmDeviceEvetnsSigned フォーマット(共通)参照
signatures	-	Signature 型[]	-	-	表 2-6 参照 署名部(複数設定可能) (※1)

#### ※1) EMOOTA R4.0 では必須。

EMOOTA R4.0 以降では、uptane 対応時のみ必須。uptane 無効の場合は空リスト。

#### 表 2-5 VsmDeviceEvetnsSigned フォーマット(共通)

項目	設定値	データ型	最小値	最大値	説明
vin	-	String 型	17 文字	17 文字	VIN
primaryId (※1)	-	String 型	0 文字	32byte	プライマリ ECU の一意の 識別子(シリアル番号など)
events	-	VsmEvents 型[]	-	-	メッセージ本文(複数も可能) 各 I/F を参照

#### ※1) OTA センタでの鍵照合に使用される。

OTA センタでは ECU 毎に鍵を設定できるため、本項目と鍵を紐づけることで、鍵を切替可能している。 T-OTA4.0 では、OEM 共通鍵を使用するため、primaryld には VIN と同じ値を設定することとする

#### 表 2-6 Signature フォーマット(共通)

項目	設定値	データ長	最小値	最大値	説明
keyid	-	String 型	64 文字	64 文字	署名検証のために必要な 公開鍵 ID (*1)
method	NONEwithECDS A	String 型	13 文字	13 文字	署名アルゴリズム
hash	-	Hash 型	-	-	署名部分のハッシュ値情 報
value	-	String 型	128 文字	128 文字	署名値を Base16 でエンコ ードした文字列

#### (\*1) ID は、署名生成用秘密鍵を、SHA256 でダイジェストを計算し、その結果を Base16 でエンコードした値

#### 表 2-7 Hash フォーマット(共通)

項目	設定値	データ長	最小値	最大値	説明
function	"SHA256"	String 型	6 文字	6 文字	ハッシュ関数
digest	-	String 型	64 文字	64 文字	Base16 エンコードされた
					ダイジェスト

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書				
OTA Software Update 4.0			otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a	

# 表 2-8 VsmEvents フォーマット(状態通知)

項目	設定値	データ長	最小値	最大値	説明
eventsUuid	-	String 型	16byte	16byte	UUID
eventsType	"rmState"	String 型	7 文字	7 文字	状態通知イベント
eventMode	"active"	String 型	6 文字	6 文字	固定
rmStateExtras	-	rmStateExtra 型	-	-	表 2-9 参照 状態情報詳細
currentTime	-	TimeMs 型	-	-	表 2-10 参照 イベント発生日時
status	"success"	String 型	7 文字	7 文字	固定
attemptId	-	String 型	-	255 文字	OTA センタで同一車両に対する同一キャンペーンを複数回適用しているか否かを判断するためのユニークな ID。車両側で任意に指定し、同一キャンペーン適用シーケンス内は同じ値を使用する。
reportId	-	String 型	-	-	条件付き項目 下記以外の場合は必須 ・車両構成情報アップロード応答受信前の場合 車両構成情報アップロード 応答以降は、車両構成情報アップロードで答以降は、車両構成情報アップロードで指定されているreportId情報を格納する。

# 表 2-9 rmStateExtras フォーマット

項目	設定値	データ長	最小値	最大値	説明
rmVehState	"IDLE", "SYNCSING", "waitCampaignU serAcceptance", "waitPackageDl UserAcceptance ", "packageDownlo ad", "waitInstallUser Acceptance", "reprog", "waitActivateUse rAcceptance", "activating", "systemSyncCh eckComplete",	String 型	4 文字	26 文字	"IDLE": OTA 更新無し "SYNCSING": 車両情報 取得中 "waitCampaignUserAcce ptance ": キャンペーン承 諾待ち "waitPackageDIUserAcc eptance": ダウンロード承 諾待ち "packageDownload": ダウンロード中 "waitInstallUserAcceptan ce": インストール承 "reprog": インストール中 "waitActivateUserAccept ance": アクティベート承 持ち "acivating": アクティベート 中 "systemSyncCheckComp lete": バージョンチェック中
stateScope	"vehicle"	String 型	7 文字	7 文字	車両 OTA 全体状況

# 表 2-10 TimeMs フォーマット

項目	設定値	データ長	最小値	最大値	説明
Time	-	Number 型	0	0x7ffffffffffffffffffffffffffffffffffff	1970/1/1 からの経過ミリ
clocksource	"default"	String 型	7 文字	7 文字	秒数   ・・・・・・・・・・・・・・・・・・・・・・・・・・・・・・・・・

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			10/152
OTA Software Update 4.0		No.	otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a

項目	設定値	データ長	最小値	最大値	説明
					"default"(車両時計時刻)

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
OTA Software Update 4.0		No.	otasu40-centerconnect-rd000-0	00 <del>12-b</del> a

#### 2.1.3. センタ Push メッセージ(C\_02\_IND)

本メッセージは MQTT(19PFv3 では gRPC)プロトコルでセンタより送信される。通信仕様の詳細は CCOM の Server Push 仕様(19PFver3 では HUCOM Server Push 仕様)を参照すること。  $\Delta 1$  センタ Push のペイロード情報フォーマットを、以下の通り、定義する。  $\Delta 1$  ペイロード情報は Base64 でエンコードされた状態で車両に送信される。  $\Delta 1$ 

表 2-11 ペイロード情報フォーマット △1

項目	設定値	データ長	最小値	最大値	説明
pushType	-	1byte	0x01	0x06	Push 通知種別
					1. 高優先キャンペーン発
					生通知
					2. OTA Action 情報取得通
					知
					3. 外部 HMI 承諾通知
					4. 駐車中 OTA 通知
					【19PFv3 適用外】
					5. OTA ログアップロード通
					知
					6. キャンペーン中止通知
campaignId	-	4byte	0x00000000	0xfffffff	Push に紐づくキャンペー
					ン ID 情報
					(特に指定がない場合は、
					0x000000000 とする)

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
OTA Software Update 4.0			otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a

#### 2.1.4. OTA Action 取得(C\_03\_Req)

本メッセージは HTTP(POST)フォーマットとし、HTTP ボディ部は GetActionRequest 型で以下にフォーマットを示す。

# 表 2-12 GetActionRequest フォーマット

項目	設定値	データ型	最小値	最大値	説明
signed	-	GetActionRequestSigned	-	-	表 2-13 参照
		型			
signatures	-	Signature 型[]	-	-	表 2-6 参照

# 表 2-13 GetActionRequestSigned フォーマット

項目	設定値	データ型	最小値	最大値	説明
vin	-	String 型	17 桁	17 桁	VIN 番号
primaryId	-	String 型	-	-	プライマリ ECU の一意の
					識別子(シリアル番号など)

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
0	TA Software Update 4.0	No.	otasu40-centerconnect-rd000-0	00 <del>12-b</del> a

#### 2.1.5. OTA Action 取得応答(C\_03\_Res)

本メッセージは HTTP(Post)フォーマットとし、HTTP ボディ部は GetActionResponse 型で以下にフォーマットを示す。

# 表 2-14 GetActionResponse フォーマット

項目	設定値	データ型	最小値	最大値	説明
signed	-	GetActionResponseSign	-	-	表 2-15 参照
		ed 型			
signatures	-	Signature 型[]	-	-	表 2-6 参照

項目	設定値	データ型	最小値	最大値	説明
actions	-	Action 型[]	-	-	表 2-17 参照

# 表 2-17 Action フォーマット

項目	設定値	データ型	最小値	最大値	説明
actionId	-	String 型	-	•	OTA Action ID 詳細は下記参照
value	-	String 型	-	-	OTA Action に応じたパラ メタ

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
С	TA Software Update 4.0	No.	otasu40-centerconnect-rd000-	00 <del>1</del> 2- <del>b</del> a

#### 表 2-18 アクション情報詳細

情報種別	actionid	value	備考
OTA Action 情報取得周期	GetActionCycle	0N	OTA Action 情報を取得要求する周期(日数)を設定する。         前回 OTA Action 情報を取得した日付から設定日数経過後に、再度         OTA Acion 情報を取得する。         0:毎 IG-ON 毎取得する。         1~N:間隔日数(デフォルト:7,最大:65534)         1の場合は翌日以降の IG=ON 時に OTA Action 情報取得要求         をセンタに送信する。         65535:OTA サービスー時停止         ※1)センタ Push があった場合、周期経過前でも OTA Action 情報を取得する。         ※2)65535 が設定されている場合、車両トリガで OTA シーケンスを開始させない。(Push 等によるセンタトリガでは、OTA シーケンス開始を許容する)
個車構成情報アップロード有無	CarConfigInfoUploadNecessit y	0,1	今回の IG=ON で収集する個車構成情報をセンタにアップロードするか必要があるか否かを設定する。 (上記と合わせ、個車構成情報に変化がない場合にも定期的に個車構成情報をアップロードする) 0:アップロード不要 1:アップロード要
車両承諾表示有無	DispConsentInCarHMI	0,1	対象車両が、車載 HMI に承諾を表示するか否か示す  O:承諾表示有  1:承諾表示無し 本設定が、"事前承諾表示無し"の場合、キャンペーン適用承諾(およびダウンロード承諾)確認は車載 HMI には表示されない。(事業者車両向け設定) ※キャンペーンに設定できる"強制承諾確認"が有効である場合でも、車載 HMI には表示されない。但し、外部 HMI での承諾操作が必要となる。

# 2.1.6. 車両構成情報ダイジェスト(C\_04\_Req)

本メッセージは HTTP(POST)フォーマットとし、HTTP ボディ部は CompactVehicleManifest 型で以下にフォーマットを示す。

# 表 2-19 CompactVehicleManifest フォーマット

項目	設定値	データ型	最小値	最大値	説明
signed	-	CompactVehicleManifest Signed 型	-	-	表 2-20 参照
signatures	-	Signature 型[]	-	-	表 2-6 参照

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
0	TA Software Update 4.0	No.	otasu40-centerconnect-rd000-0	)0 <del>12-b</del> a

# 表 2-20 CompactVehicleManifestSigned フォーマット

項目	設定値	データ型	最小値	最大値	説明
vin	-	String 型	17 文字	17 文字	VIN 番号
primaryId	-	String 型	-	-	プライマリ ECU の一意の 識別子(シリアル番号など)
clientDigest	-	String 型	-	255 文字	現在の構成情報を表す、 車両で生成されたダイジェ スト情報(ダイジェストは、 個車構成が変化しない限 り変化しないこと)
timestamp	-	Number 型	-	-	UNIX タイムスタンプとして エンコードされた現在の日 付と時刻(UTC 秒)
packageStorage	-	PackageStrage 型	-	-	表 2-21 参照 パッケージ格納領域情報
uploadReason	-	String 型	1文字	255 文字	送信理由個別理由を設定する場合は、自由文を設定・不明("0")(使用例:ユーザ承諾が得られた後に再度車両構成情報をアップロードするシーンや、ダウンロードするシーントするシーン)・定期処理("2")・Push("3")・変更検出("4")
locale	-	String 型	20 文字	20 文字	HMI で表示する言語を指 定する。
preferredCampaignI d	-	Number 型	-	-	任意設定項目 取得キャンペーンを指定す る場合、本項目にキャンペ ーン ID を設定する。
attemptId		String 型	-	255 文字	OTA センタで同一車両に 対する同一キャンペーンを 複数回適用しているか否 かを判断するためのユニ ークな ID。 車両側で任意に指定し、 同一キャンペーン適用シー ケンス内は同じ値を使用 する。

# 表 2-21 PackageStorage フォーマット

項目	設定値	データ型	最小値	最大値	説明
used	-	Number 型	-	-	パッケージ格納領域の使 用済バイト数
available	-	Number 型	-	-	パッケージ格納領域の使 用可能なバイト数。

eventsType	"error"	String 型	12 文字	12 文字	エラー情報
eventMode	"active"	String 型	6 文字	6 文字	固定
errorExtras	-	oemError 型[]	-	-	表 2-92 参照
					エラー情報
timeStarted	-	TimeMs 型	-	-	表 2-10 参照
					エラー発生時刻
currentTime	-	TimeMs 型	-	-	表 2-10 参照
					イベント発生日時
status	"failure"	String 型	7 文字	7 文字	"failure":失敗
errorCodes	-	ErrorCode 型[]	-	-	表 2-93 参照
					エラー情報(複数)
campaignId	-	String 型	1 文字	32byte	キャンペーン ID

#### 表 2-92 OemError フォーマット

項目	設定値	データ型	最小値	最大値	説明
phaseCode	-	Number 型	-	-	OTA フェーズ番号
siteCode	-	Number 型	-	-	エラー発生コンポーネント
oemCode	-	Number 型	-	-	OEM エラーコード
targetId	-	String 型	-	-	対象 ECU 番号

#### 表 2-93 ErrorCode フォーマット

項目	設定値	データ型	最小値	最大値	説明
code	-	Number 型	-	-	エラー番号
					2.2.2 参照
description	-	String 型	-	-	エラー説明

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			51/152
0	TA Software Update 4.0	No.	otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a

#### 2.1.32. センタエラ一通知 (C\_29\_Res)

本メッセージは HTTP(POST)フォーマットとし、HTTP ボディ部は ErrorCode 型で以下にフォーマットを示す。

表 2-94 ErrorCode フォーマット

項目	設定値	データ型	最小値	最大値	説明
code	-	Number 型	-	-	エラー数値
					2.2.2 参照
description	-	String 型	-	-	エラー説明

#### 2.1.33. 新バージョン有無確認(Director Root Metadata) (C\_30\_Req)

本メッセージは HTTP(GET)フォーマットとし、ファイル取得する。HTTPボディ部のフォーマットは規定しない。 取得 URL は、「https://{CDN サーバの FQDN}/uptane/director/{バージョン情報}.root.json」とする。 尚、{バージョン情報}へは、車両内に保存している Director Root Metadata のバージョンを 1 増加させた値を、 設定すること。

Direct Root Metadata のフォーマットは、CommonMedatada 型(表 2-30)である。

SignedMetadata の body 部の中身を、以下に定義する。 △1

表 2-95 RootMetadata フォーマット △1

項目	設定値	データ型	最小値	最大値	説明
keys	-	PublicKey[]型	-	-	メタデータ署名検証用の鍵
					セット
roles	-	TopLevelRole[]型	-	-	各メタデータ署名検証で利
					用する鍵情報

#### 表 2-96 PublicKey フォーマット △1

項目	設定値	データ型	最小値	最大値	説明
publicKeyId	-	String 型	64 文字	64 文字	署名検証用公開鍵 ID(*1)
publicKeyType	"ECDSA"	String 型	5 文字	5 文字	鍵種別(RSA/ECDSA)
publicKeyValue	-	String 型	-	-	署名検証用公開鍵を
					Base16 でエンコードした
					文字列

(\*1)公開鍵のペアとなる秘密鍵を、SHA256でダイジェストを計算し、その結果を Base16でエンコードした値

#### 表 2-97 TopLevelRole フォーマット △1

項目	設定値	データ型	最小値	最大値	説明
role	-	ENUM(String)型	-	-	役割
					{root, targets, snapshot, timestamp}
keylds	-	String[]퐫	-	-	role が指し示すメタデータ の署名検証用公開鍵 ID(*1)
threshold	"1"	Number 型	-	-	role が指し示すメタデータ の署名が正当と判断する 署名検証成功数の閾値

(\*1)公開鍵のペアとなる秘密鍵を、SHA256でダイジェストを計算し、その結果を Base16でエンコードした値

## 2.1.34. 新バージョン有無確認(Image Root Metadata) (C\_31\_Req)

本メッセージは HTTP(GET)フォーマットとし、ファイル取得する。HTTPボディ部のフォーマットは規定しない。

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書				
0	TΔ Software Undate 4.0	No	otasu40-centerconnect-rd000-0	1012-ba	

取得 URL は、「https://{ CDN サーバの FQDN}/uptane/image/{バージョン情報}.root.json」とする。 尚、{バージョン情報}へは、車両内に保存している Image Root Metadata のバージョンを 1 増加させた値を、設 定すること。

Image Root Metadata のフォーマットは、Director Root Metadata(2.1.33 2.1.33 新バージョン有無確認 (Director Root Metadata) (C\_30\_Req))と、同じである。 △1

2.1.35.Image Snapshot Metadata ダウンロード要求 (C\_32\_Req)

本メッセージは HTTP(GET)フォーマットとし、ファイル取得する。HTTP ボディ部のフォーマットは規定しない。 取得 URL は、「https://{ CDN サーバの FQDN}/uptane/image/{バージョン情報}.snapshot.json」とする。 尚、{バージョン情報}へは、直前にダウンロードした Image Timestamp Metadata の signed.body.version の値を、設定すること。

Image Snapshot Metadata のフォーマットは、「表 2-28 VehicleVersionManifestResponse フォーマット」 の"snapshotMetadata"と、同じである。 Δ1

2.1.36. Image Timestamp Metadata ダウンロード要求 (C\_33\_Req)

本メッセージは HTTP(GET)フォーマットとし、ファイル取得する。HTTP ボディ部のフォーマットは規定しない。 取得 URL は、「https://{CDN サーバの FQDN}/uptane/image/timestamp.json」とする。

Image Timestamp Metadata のフォーマットは、「表 2-28 VehicleVersionManifestResponse フォーマット」 の"timestampMetadata"と、同じである。△1

2.1.37. Image Targets Metadata ダウンロード要求 (C\_34\_Req) △1

本メッセージは HTTP(GET)フォーマットとし、ファイル取得する。HTTP ボディ部のフォーマットは規定しない。 取得 URL は、「https://{CDN サーバの FQDN}/uptane/image/{バージョン情報}.targets.json」とする。 尚、{バージョン情報}へは、直前にダウンロードした Image Snapshot Metadata の signed.body.snapshotMetadataFiles[0].version の値を設定すること。

Image Targets Metadata のフォーマットは、「表 2-28 VehicleVersionManifestResponse フォーマット」の"targetsMetadata"と、同じである。 Δ1

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
OTA Software Update 4.0			otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a

## 2.1.38.OTA コマンド取得(C\_36\_Req)

本メッセージは HTTP(POST)フォーマットとし、HTTP ボディ部は CommonMetadata 型で以下にフォーマットを示す。

## 表 2-98 CommonMetadata フォーマット

項目	設定値	データ型	最小値	最大値	説明
signed	-	GetComnadSigned 型	-	-	表 2-99 参照
signatures	-	Signature 型[]	-	-	表 2-6 参照

## 表 2-99 GetCommandSigned フォーマット

項目	設定値	データ型	最小値	最大値	説明
vin	-	String 型	17 桁	17 桁	VIN 番号
primaryId	-	String 型	-	-	プライマリ ECU の一意の
					識別子(シリアル番号など)

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
0	TA Software Update 4.0	No.	otasu40-centerconnect-rd000-0	00 <del>12-b</del> a

## 2.1.39. OTA コマンド取得応答(C\_36\_Res)

本メッセージは HTTP(Post)フォーマットとし、HTTP ボディ部は GetCommandResponse 型で以下にフォーマットを示す。

## 表 2-100 GetCommandResponse フォーマット

項目	設定値	データ型	最小値	最大値	説明
signed	-	GetComnadSigned 型	-	-	表 2-99 参照
signatures	-	Signature 型[]	-	-	表 2-101 参照

## 表 2-101 GetCommandResponseSigned フォーマット

項目	設定値	データ型	最小値	最大値	説明
body	-	GetCommandResponse	-	-	表 2-102 参照
		Body 型			

## 表 2-102 GetActionResponseBody フォーマット

項目	設定値	データ型	最小値	最大値	説明
vin	-	String 型	17	17	
commandId	-	Number 型	-	-	
command	"UpldVehclCnfg" , "UpldVehclLog", "CancelCampaig n", "StartCampai gn", "InstallCamp aign", "ExtCancel Campaign", "Get OtaAction"	String 型	-	-	UpldVehclCnfg: 個車構成アップロード要求 UpldVehclLog: 車両ログアップロード要求 CancelCampaign: 指定キャンペーンの取り消し要求 StartCampaign: 指定キャンペーンの開始要求。InstallCampaign: 指定キャンペーンのインストールを開始要求 ExtCancelCampaign: 外部サービスからのキャンペーンキャンセル通知GetOtaAction: action情報取得
campaignId	-	Number 型	-	-	任意項目。 CommandId が下記の場 合のみ指定 ・CancelCampaign ・StartCampaign ・InstallCampaign ・ExtCancelCampaign

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			55/152
0	TA Software Undate 4.0	Nο	otasu40-centerconnect-rd000-0	1042-ba

## 2.1.40. リプロポリシーメタデータ取得(C\_06\_Req)

本メッセージは HTTP(GET)フォーマットし、ファイル取得する。HTTP ボディ部のフォーマットは規定しない。 2.1.8 車両構成情報アップロード応答(C\_04\_Res,C\_05\_Res)で指定された URL より取得を行う。 (19PFver3 では、リプロポリシーメタデータは SoftwarePackage に包含されるため対応不要) Δ1

#### 2.1.41. ダウンロードメタデータ取得(C\_07\_Req)

本メッセージは HTTP(GET)フォーマットとし、ファイル取得する。HTTP ボディ部のフォーマットは規定しない。 2.1.8 車両構成情報アップロード応答(C\_04\_Res,C\_05\_Res)で指定された URL より取得を行う。 (19PFver3 では、ダウンロードメタデータは SoftwarePackage に包含されるため対応不要)  $\Delta$ 1

## 2.1.42. 車両ログアップロード URL 取得(C\_37\_Req)

本メッセージは HTTP(Post)フォーマットとし、HTTP ボディ部は Common Request Metadata MultiPartInitiateUploadRequest 型で以下にフォーマットを示す。△1

表 2-103 Common Request Metadata フォーマット △1

項目	設定値	データ型	最小値	最大値	説明
signed	-	MultiPartInitiateUploadR equest 型	1	1	表 2-104 参照
signatures	-	Signature 型[]	1	•	表 2-6 参照

#### 表 2-104 MultiPartInitiateUploadRequest フォーマット

項目	設定値	データ型	最小値	最大値	説明
vin	-	String 型	17	17	VIN
primaryld	-	String 型	-	-	OTA マスタ搭載の ECU ID
currentTime	-	Number 型	-	-	UNIX のタイムスタンプ (UTC)
uploadTrigger	-	String 型	-	-	アップロードトリガー情報 例: OTA センタからの場 合、"ota center"、車両空 の場合、"vehicle"
campaignId	-	Number 型	-	-	キャンペーンに紐づく場合 のみ入力
errorCode	-	Number 型	-	-	
uploadParts	-	UploadPart 型[]	-	-	表 2-105 UploadPart フォーマット参照
beginTime	-	String 型	-	-	yyyy-MM- dd'T'HH:mm:ssZ (UTC)
endTime	-	String 型	-	-	yyyy-MM- dd'T'HH:mm:ssZ (UTC)
category	log	String 型	-	ı	設定値通りに入力すること
transportType	-	String 型	-	-	下記が有効な値: "cellular", "wifi", "external memory","bluetooth", "other".
fileName	-	String 型	-	-	240 文字以内で下記文字 が有効: 0-9, a-z, A-Z, "-", "_", "."

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
0	TA Software Update 4.0	No.	otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a

#### 表 2-105 UploadPart フォーマット

項目	設定値	データ型	最小値	最大値	説明
partNumber	-	Number 型	1	10000	ECU 情報(ECU の ID)
md5CheckSum			-	-	part data を 128 bit の
					MD5 でハッシュ化した上
					で、base64 でエンコードし
	-	String 型			た値。署名付 URL の計算
					に利用。車両ログアップロ
					ードの際にメッセージの整
					合性チェックで用いる。

#### 2.1.43. 車両ログアップロード URL 取得応答(C\_37\_Res)

本メッセージについて、2.1.44 車両ログアップロードで必要な情報がレスポンスで OTA センタから返送されるため、レスポンスデータについて記載する。

#### 表 2-106 (レスポンス)

項目	設定値	データ型	最小値	最大値	説明
uploadContext	-	String 型	-	-	2.1.46 車両ログアップロー ド完了通知で利用
uploadParts	-	UploadPart 型[]	-	-	

## 表 2-107 UploadPart フォーマット(レスポンス)

項目	設定値	データ型	最小値	最大値	説明
partNumber	-	Number 型	1	10000	ECU 情報(ECU の ID)
md5CheckSum	-	String 型	-	-	part data を 128 bit の MD5 でハッシュ化した上で、base64 でエンコードした値。車両ログアップロードの際にメッセージの整合性チェックで用いる。
uploadURL	-	String 型	-	2048	署名付 URL

#### 2.1.44. 車両ログアップロード (C\_38\_Reg)

本メッセージは HTTP(PUT)フォーマットとし、AWS S3 のファイルアップロード API(参照)を利用してファイルアップロードすること。

 $\Theta$ 2.1.42 車両ログアップロード URL 取得(C\_37\_Req)で指定された URL より取得を行う。表 2-105 で定義した partNumber 毎にファイルアップロードすること。 なお、HTTP ヘッダには Content-MD5 を追加し、表 2-105 で定義した md5CheckSum で入力した値を使用してリクエストすること。  $\Delta$ 1

#### 2.1.45. 車両ログアップロード応答 (C\_38\_Res)

本メッセージについてフォーマット定義はない。ただし、2.1.46 車両ログアップロード完了通知で必要な情報がレスポンスで OTA センタから返送されるため、レスポンス例を記載する。

#### 表 2-108 (レスポンス例)

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			57/152

## 2.2. 応答コード

## 2.2.1. HTTP 応答コード

HTTP Code	説明					
200	成功					
	Processed successfully 生成					
201	生成					
	Created					
204	正常に処理されましたが、応答するコンテンツがありません					
	Processed successfully, no content in response					
304	変更なし					
	Not Modified					
400	要求が正しくありません。構文が正しくないため、サーバが要求を理解できませんでした。					
	クライアントは、変更せずに要求を繰り返すべきではありません					
	Bad Request. The request could not be understood by the server due to malformed					
	syntax. The client SHOULD NOT repeat the request without modifications.					
401						
	Unauthorized (requires user authentication)					
403	禁止 (認証に関係なく許可されていません)					
	Forbidden (not allowed regardless of authentication)					
404	サーバは、要求 URI に一致するものを見つけられませんでした。					
	The server has not found anything matching the Request-URI					
406	不受理 (サーバは、要求を満たす応答を提供できません)					
	Not acceptable (the server cannot supply a response that satisfies the request's					
445	Accept header)					
415	サポートされていないメディア タイプ (サーバは、要求の Content-Type ヘッダで指定され					
	たメディア タイプを処理できません)					
	Unsupported media-type (the server cannot process the media-type specified by the					
500	request's Content-Type header)					
503	サービス利用不可。サーバは、現時点で要求を処理できません。また、クライアントが後					
	続の要求を行う前に待機する秒数を含む 'Retry-After' ヘッダを含めることもできます。					
	Service Unavailable. The server is unable to process requests at the current time.					
	May also include a 'Retry-After' header with the number of seconds the client should wait before making subsequent requests.					
	Should wait before making subsequent requests.					

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
OTA Software Update 4.0		No.	otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a

#### 2.2.2. エラー通知コード

OEM Error	説明
Code	
1112	禁止
	Forbidden
1113	サービス利用不可
	Service unavailable
30001	不正な要求
	Bad request
30002	内部サーバエラー
	Internal server error
30003	無効な要求
	Invalid request data
30007	リソースが見つかりません
	Resource not found
30008	サポートされていないメディア タイプ
	Unsupported media type
30009	不受理
	Not acceptable
30010	ファイルサイズ超過
	File too large
30012	要求に必須データがありません
	Request is missing mandatory data
30013	ファイルが添付されていないか、ファイルが空です
	No file attached or file is empty
44004	署名の検証に失敗しました
	Signature verification failed
30003	
	Invalid request data
	Code 1112 1113 30001 30002 30003 30007 30008 30009 30010 30012 30013 44004

## 2.3. 通信経路保護

- ・ 通信網の保護として、マスタ ECU の車外通信対抗が TSC の場合、OTA センターマスタ ECU 間通信は、mTLS 通信を実現すること。車外通信対抗が CDN の場合、OTA センターマスタ ECU 間は、TLS 通信を実現すること。
- ・ サーバ認証/クライアント認証は、TLS バージョン 1.3 の標準シーケンスに従い、処理を行うこと。
- ・ マスタ ECU の車外通信対抗が TSC の場合、暗号スイートは、マスタ ECU に該当する ECU に応じて参考文献のいずれかに定義された暗号スイートを用いて通信すること。

#### (参考文献)CCOM 通信仕様書(19PFv3 では発行対象外), HUCOM 通信仕様書 △1

マスタ ECU の車外通信対抗が TSC でない場合、暗号スイートは、以下を使用すること。
 TLS\_AES\_128\_GCM\_SHA256, TLS\_AES\_256\_GCM\_SHA384
 (19PFv3 では、「190\_AppendixA\_ECU 独自のサイバーセキュリティ要求仕様書」指定の暗号スイートを使用すること) △1

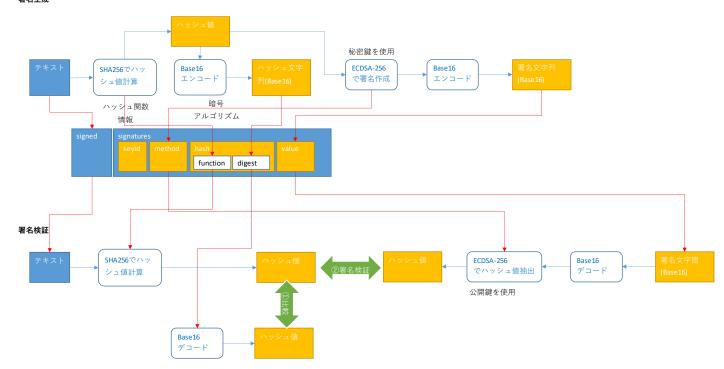

#### 2.4. 【参考】署名生成/検証フロー

署名付与/検証フローを補足する。一般的に、署名付与する場合、署名対象メッセージに対して、ハッシュ関数を用いてハッシュ値を作成し、その値を秘密鍵で暗号化し、これをデジタル署名として、メッセージに付与して、相手先へ送信する。

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書				
0	TA Software Update 4.0	No.	otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a	

T-OTA4.0 のフローでは、このハッシュ値、および、デジタル署名を、相手先へ送信するが、送信前に、これらの値を、Base16 エンコードし変換した文字列を、相手先に送信すること。ハッシュ関数「SHA-256」、暗号アルゴリズム「ECDSA-256」の場合の、署名検証フローを図に示す。

#### 署名生成

#### 署名検証フローは、検証を、

- ①. 受信したハッシュ値と、受信したメッセージに対して、ハッシュ関数を用いて作成したハッシュ値の比較
- ②. ①で作成したハッシュ値と、受信した署名文字列から抽出したハッシュ値の比較の 2Steps を記載している。ただ、②は、①の比較処理を包含しているため、①の比較は、任意で良い。また、図では、署名検証の一例として、ハッシュ値を比較しているが、Base16でエンコードして、文字列同士を比較しても良い。

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書			
OTA Software Update 4.0		No.	otasu40-centerconnect-rd000-0	00 <del>1</del> 2- <del>b</del> a

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書		
	otasu40-centerconnect-rd000-0042-a		

# 1. Positioning of this specification

The specification defines communication I/F between OTA Master and Center.

## 2. Center - Master communication specifications

#### 2.1. Communication message format

Communication message format is shown below.

#### 2.1.1. Common

Communication protocol of communication message is HTTP. Data length is variable. However, since Center message (C\_02\_IND) is supposed to use Push server of TSC, it communicates with MQTT (gRPC in 19PFver3).  $\triangle 1$ 

#### 2.1.1.1. Connection URL

#### (1) OTA Center

The connection to OTA Center goes through TSC certification GW. FQDN refers to CCOM terminal setting request 24CECU\_Terminal Configuration Specification (24MM\_009\_Terminal Configuration Specification in 19PFver3) form, and directories after FQDN are defined in Appendix "Communication list and HTTP information list". △1

Table 2-1 Path format

Item	Content
Path URL	https://{FQDN for OTA}/{directory}

#### (2) CDN

Use CDN when communicating large amounts of data from OTA Center. FQDN refers to CCOM terminal setting request 24CECU\_Terminal Configuration Specification (24MM\_009\_Terminal Configuration Specification in 19PFver3) form, and directories after FQDN are defined in Appendix "Communication list and HTTP information list".  $\triangle$ 1

Table 2-2 Path of CDN format

Item	Content
Path URL	https://{FQDN for CDN}/{directory}

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書		
	otasu40-centerconnect-rd000-0042-a		

#### 2.1.1.2. HTTP format

The HTTP format required for communication between vehicle and OTA Center is shown below. For details, refer to CCOM Communication Spec (HUCOM Communication Spec in 19PFver3). △1

**Table 2-3 HTTP format (Common)** 

Input and output		Item	Set value	Explanation
Commo	Status line	HTTP version	HTTP/2.0	
Vehicle	Status line	HTTP method	POST/GET/PUT	
<b>↓</b>	HTTP header	Host	Server host name	Write FQDN *1
Center		Content-Type	application/json	Content type of the message body *1
		User-Agent	Information management key	CCOM specification compliant (HUCOM specification compliant
				in 19PFver3.) △1
		x-vin	VIN	CCOM specification compliant (HUCOM specification compliant
				in 19PFver3.) △1
		DATE	Date	CCOM specification compliant (HUCOM specification compliant
				in 19PFver3.) △1
		Content-Length	HTTP body size (Byte length)	Not required for GET *1
		Accept-Encoding	gzip	CCOM specification compliant (HUCOM specification compliant
				in 19PFver3.) △1
		Content-Encoding	gzip	In the case that the size of request body is 2KB or larger only (CCOM specification compliant (HUCOM specification compliant
				in 19PFver3.)) △1
	HTTP body		Json format according to the specifications of each message.	
Center	Status line	HTTP status cord	Center processing success : 200 HTTP error: (Other than 200)	Referred to 2.2.1.
↓	HTTP header	Response-From	HTTP status code identification ID	
Vehicle		Content-Type	application/json	
	HTTP body		Json format according to the specifications of each message.	

<sup>\*1:</sup> In the case of CDN communication, only Host, Content-Type, Content-Length is sufficient for HTTP header.

#### 2.1.1.3. Hash / Signing

The format for assigning Hash / signature to Master ECU ~ Center is designed so that multiple Hash / signature can be stored. This is an I/F specification with an eye on expandability, such as storing a different signature with different Hash (example : SHA256 / SHA384) and encryption algorithm (example : RSA/ECDSA) in Hash algorithm for same hashing / Signature target.

The signature target is the part in bold letters including the brackets after ["signed":] below.

```
"xxx": {
    "signatures": [],
    "signed": {···}
}
```

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	
	otasu40-centerconnect-rd000-0042-a	

## 2.1.2. Campaign Status Notification (C\_01\_Req)

This message is sent by HTTP (POST) format, HTTP body part is VsmDeviceEvents, and the format is shown below.

Table 2-4 VsmDeviceEvents format (Common)

Item	Set value	Data type	Minimum value	Maximum value	Explanation
signed	-	VsmDeviceEventsSigned	-	-	Referred to Table 2-5 VsmDeviceEvetnsSigned format (Common) .
signatures	-	Signature[]	-	-	Referred to Table 2-6. Signature section (Multiple settings possible) (※1)

<sup>\*1)</sup> Required for EMOOTA R4.0.

For EMOOTA R4.0 and later, required only when uptane is supported. An empty list if uptane disabled.

Table 2-5 VsmDeviceEvetnsSigned format (Common)

Item	Set value	Data type	Minimum value	Maximum value	Explanation
vin	-	String	17 character	17 character	The Vehicle Identification Number (or other unique ID specified by OEM) for the associated vehicle.
primaryld (*1)	-	String	0 character	32 byte	The Identification of the primary ECU used to identify the ECU sending the message.
events	-	VsmEvents[]	-	-	An array of events generated by the source Device Set.

## (\*1) Used for key verification at OTA Center.

Since the key can be set to per ECU in OTA Center, the key can be switched by associating this item with the key.

Since OEM common key is used in T-OTA4.0, primaryld is set to the same value as VIN.

Table 2-6 Signature format (Common)

Item	Set value	Data type	Minimum value	Maximum value	Explanation
keyid	-	String	64 character	64 character	Public key ID which is necessary for signature verification. (*1)
method	NONEwithECDS A	String	13 character	13 character	Signature generation algorithm/method. Refer to the Supported Signature Methods for allowed values. Currently supported methods are "SHA256withRSA", "NONEwithRSA", "SHA256withECDSA", "NONEwithECDSA"
hash	-	Hash	-	-	Hash of the "signed portion" section, inclusive opening and closing curly braces.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	69/152
	otasu40-centerconnect-rd000-0042-a	

Item	Set value	Data type	Minimum value	Maximum value	Explanation
value	-	String	128 character	128 character	Public key ID which is
					necessary for signature verification.

(\*1) The ID is a value obtained by calculating the digest of the private key for signature generation with SHA256 and encoding the result with Base16.

Table 2-7 Hash format (Common)

Item	Set value	Data type	Minimum value	Maximum value	Explanation
function	"SHA256"	String	6 character	6 character	Hash Function used for computing the hash. See Supported Hash Functions.
digest	-	String	64 character	64 character	Base16 encoded digest.

Table 2-8 VsmEvents format (Status notification)

Item	Set value	Data type	Minimum value	Maximum value	Explanation
eventsUuid	-	String	16 byte	16 byte	Unique identifier for the event. Ideally, the source device has a good time source and unique MAC address to utilize a Version 1 UUID.  Alternately, if the source doesn't have a unique MAC address, or it doesn't have an accurate RTC time source, it should utilize a version 4 UUID assuming it has a secure, true random number generator.
eventsType	"rmState"	String	7 character	7 character	rmState: a notification of the client's current state notification: a notification of 'available updates' has been presented to the user download: a VSM element is being (or has been) downloaded to the phone or to the head unit, from either SDP or phone installation: a VSM element is being (or has been) installed, either successfully or not activate: Event related to installed software being activated. Status can be one of "accepted", "declined", "postponed", "success" or "failure" syncComplete: Synchronization has been completed. Currently allowed values are "success" and "failure". ackinstall: Status is either "accepted" or "skipped". The user isn't provided any choice other than to acknowledge the result

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書		
	otasu	40-centerconnect-rd000-00 <mark>42</mark> -a	

Item	Set value	Data type	Minimum value	Maximum value	Explanation
over#Meda	"active"	Chring	Gobornator	6 character	oemError: Only one possible status "failure". The Tier1 reported a general error with ECU specific error codes tracking: Notification that download of a file was completed. updateComplete: Notification that campaign update was successful. Only possible status values are "success" and "failure". If this value is not valid, it will result in unexpected behavior on helpdesk and dashboard.
eventMode	active.	String	6 character	6 character	"active" or "passive".  Note event mode for activation should always be "active" per Jaspar.
rmStateExtras	-	rmStateExtra	-	-	Referred to Table 2-9. State information details.
currentTime	-	TimeMs	-	-	Referred to Table 2-10. Event date and time
status	"success"	String	7 character	7 character	Fixed.
attemptId		String		255 character	A unique ID used to distinguish repeated updates of the same campaignId on the same device.SDP will not reject the request if attemptId is not present but it will result in unexpected behavior on helpdesk and dashboard.  Note: the "attemptId" is required for notifications which requires to include campaign ID, if vehicle doesn't send attemptId properties for those notifications, SDP Dashboard and Helpdesk behavior will be unpredictable. When vehicle applying the same campaign multiple times, set an unique ID (n-th time of campaign application) within the same campaign at the vehicle side in order to completely distinguish the notifications for each campaign application. Vehicles are assumed the attemptId" to be retained the initial value as String: "0000" (ASCII 0x30 0x30 0x30 0x30). The "attemptId" do not allow "empty characters" and "strings consisting of only whitespace characters" as values.
reportId	-	String	-	-	Unique identifier assigned by SDP for this element update. Used by client to report metrics

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	71/152
	otasu40-centerconnect-rd000-0012-a	

Item	Set value	Data type	Minimum value	Maximum value	Explanation
					related to the element update. Expected in all notifications except following: "eventType": "error" "eventType": "rmState" with new "rmVehState" for Initializing "eventType": "rmState" with new "rmVehState" for Syncing If this value is not present for the applicable event types, it will result in unexpected behavior on helpdesk and dashboard.

## Table 2-9 rmStateExtras format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
rmVehState	"IDLE", "SYNCSING", "waitCampaignU serAcceptance", "waitPackageDI UserAcceptance ", "packageDownlo ad", "waitInstallUser Acceptance", "reprog", "waitActivateUse rAcceptance", "activating", "systemSyncCh eckComplete",	String	4 character	26 character	Indication of the last active state reported by the Tier1 application. Possible states are "waitCampaignUserAcce ptance", "waitPackageDlUserAcc eptance", "packageDownload", "waitInstallUserAcceptan ce", "reprogReady", "reprog", "waitActivateUserAccept ance", "postProgramming", "systemSyncCheckComp lete", "infoCampaignComplete", "idle", "syncing", "activating".
stateScope	"vehicle"	String	7 character	7 character	Either 'vehicle' or 'ecu'

## Table 2-10 TimeMs format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
Time	-	Number	0	0x7ffffffffffffffffffffffffffffffffffff	Milliseconds (ms) elapsed since midnight on 1 January 1970 GMT.
clocksource	"default"	String	7 character	7 character	Either synced for trusted time (from SDP) or default for realtime clock on client platform or gps for GPS time.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書		
	otasu40-centerconnect-rd000-0042-a		

## 2.1.3. Center Push message (C\_02\_IND)

This message is sent from center at MQTT (gRPC in 19PFver3) protocol. For details of communication specifications, refer to Server Push specification of CCOM (HUCOM Server Push Spec in 19PFver3).  $\triangle$ 1 Define payload information format of Center Push as follows.  $\triangle$ 1 Payload data encoded by Base64 is sent to the vehicle.  $\triangle$ 1

Table 2-11 Payload information format  $\triangle$ 1

Item	Set value	Data type	Minimum value	Maximum value	Explanation
pushType	-	1byte	0x01	0x06	Push notification type.  1. High priority campaign notification  2. OTA Action Information acquisition notification  3. External HMI acceptance notification  4. Parked OTA [Not applicable for 19PFv3]  5. OTA log update notification  6. Campaign abort notification
campaignId	-	4byte	0x00000000	0xfffffff	Campaign ID information associated with Push. (If not specified, set to 0x00000000)

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	73/152
	otasu40-centerconnect-rd000-0042-a	

## 2.1.4. OTA Action acquisition (C\_03\_Req)

This message is HTTP (POST) format, HTTP body part is GetActionRequest, and the format is shown below.

Table 2-12 GetActionRequest format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
signed	-	GetActionRequestSigned	-	-	Referred to Table 2-13.
signatures	-	Signature[]	-	-	Referred to Table 2-6.

### Table 2-13 GetActionRequestSigned format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
vin	-	String	17 digits	17 digits	VIN of the vehicle.
primaryId	-	String	-	-	Unique identifier of the primary ECU. (e.g. serial number)

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書		
	otasu40-centerconnect-rd000-0042-a		

## 2.1.5. OTA Action acquisition Response (C\_03\_Res)

This message is HTTP (POST) format, HTTP body part is GetActionResponse, and the format is shown below.

Table 2-14 GetActionResponse format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
signed	-	GetActionResponseSign ed	-	-	Referred to Table 2-15.
signatures	-	Signature[]	-	-	Referred to Table 2-6.

### Table 2-15 GetActionResponseSigned format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
body	-	GetActionResponseBody	-	-	Referred to Table 2-16.

### Table 2-16 GetActionResponseBody format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
actions	-	Action[]	-	-	Referred to Table 2-17.

#### Table 2-17 Action format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
actionId	-	String	-	-	OTA Action ID. Referred to below for details.
value	-	String	-	-	Value of the action.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	75/152
	otasu40-centerconnect-rd000-0042-a	

Table 2-18 Action information details

Information type	actionid	value	Remarks
OTA Action information acquisition cycle	GetActionCycle	0N	Set the cycle (days) for requesting acquisition of OTA Action information.  Acquisition OTA Action information again after the set number of days has passed since the date OTA Action information was acquired  0: Acquire every IG=ON every time.  1 ~ N: Interval days (Default: 7, Maximum: 65534)  In the case of 1, request OTA Action information acquisition to IG=ON from the next day onward to center.  65535: OTA service suspended.  *1) If there is Center Push, acquire OTA Action information even before the cycle has elapsed.  *2) If 65535 is set, do not let vehicle trigger start OTA sequence. (Center trigger by Push etc. allows OTA sequence start.)
Individual vehicle configuration information upload or not	CarConfigInfoUploadNecessity	0, 1	Set whether Individual vehicle configuration information collected in IG=ON this time needs to be uploaded to center or not. (Combined with the above, upload Individual vehicle configuration information periodically even if Individual vehicle configuration information does not change.)  0: No upload required  1: Upload required
Vehicle approval indication presence or absence	DispConsentInCarHMI	0, 1	Indicates whether or not target vehicle will display acceptance to Invehicle HMI.  0: Approved  1: No indication of acceptance If this setting is "No prior consent indication", campaign applied acceptance (and download acceptance) confirmation does not appear in In-vehicle HMI. (setup for business person vehicle)  * Even if "Compulsion acceptance confirmation", which can be set in campaign, is valid, it is not displayed in In-vehicle HMI.

### 2.1.6. Vehicle configuration information digest (C\_04\_Req)

This message is HTTP (POST) format, HTTP body part is CompactVehicleManifest, and the format is shown below.

Table 2-19 CompactVehicleManifest format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
signed -		CompactVehicleManifest Signed	•	-	Referred to Table 2-20.
signatures	-	Signature[]	-	-	Referred to Table 2-6.

Table 2-20 CompactVehicleManifestSigned format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
vin	-	String	17 character	17 character	VIN of the vehicle.
primaryld	-	String	-	-	Unique identifier of the primary ECU. (e.g. serial number)
clientDigest	-	String	-	255 character	Client-generated digest of its current configuration information. The digest should not

otasu40-centerconnect-rd000-0042-a

Item	Set value	Data type	Minimum value	Maximum value	Explanation
					change unless the vehicle's information has. changed. For example, time moving forward should not cause the clientDigest to change.
timestamp	-	Number	-	-	Unix epoch seconds. This timestamp should never go backwards and will be used for ordering the sequence of client reported requests/events on the backend.
packageStorage	-	PackageStrage	-	-	Referred to Table 2-21. PackageStorage area
uploadReason		String	1 character	255 character	information.  Indicates the reason the OTAmatic client sent this message. Possible values for informational purpose only: -Unknown ("0") - Other than below(e.g. a case where a vehicle needs to send Config Check Request or Sync Check Request after getting user acceptance of campaign application or after getting user acceptance of file download, a case where a vehicle needs to send Config Check Request or Sync Check Request or Sync Check Request again due to download failure and so on ). Opening Communication ("1") - new or newly subscribed vehicle connecting to OTAmatic SDP for the first timePeriodic ("2") - periodic timer controlling the interval for configuration upload expiredSMS ("3") - SMS was received by the vehicle requesting that its configuration be uploadedChange Detected ("4") - vehicle side detection of a change in configurationIgnition ON ("5") - ignition ON event detected and periodic timer not being usedUser Triggered ("6") - vehicle user manual trigger to check for updatesBattery ON (e.g. ECU replacement) event detectedYard Worker Trigger ("8") - upload triggered manually by yard workerOther Worker

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	77/152
	otacu40 conterconnect rd000 0012 c	

			Minimum	Maximum	
Item	Set value	Data type	value	value	Explanation
					Trigger ("9") - upload
					triggered manually by other (non-yard) worker.
locale	-	String	20 character	20 character	Locale used for any
					localized parameters in
		N 1			the response.
preferredCampaignI d	-	Number	-	-	optional Campaign ID that may customize
					Campaign Information
					returned in the response
					if the Preferred Campaign ID matches a
					Campaign that the
					vehicle is eligible for.
attemptld		String	-	255 character	Unique identifier within
					the same campaign at the vehicle side in order
					to completely distinguish
					the number of
					notifications ("nth") of campaign applications,
					when the vehicle
					applying the same
					campaign multiple times. "empty characters" or
					"strings consisting of only
					whitespace characters"
					are not allowed to be
					used. A vehicle sends Attempt ID = "0000" as
					default value in a case
					where any campaign
					application has not been
					accepted yet.

## Table 2-21 PackageStorage format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
used	-	Number	•	•	Currently used bytes of package storage space.
available	-	Number	-	-	Currently available (unused) bytes of package storage space.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	78/152
	otasu40-centerconnect-rd000-0042-a	

## 2.1.7. Vehicle configuration information upload (C\_05\_Req)

This message is HTTP (POST) format, HTTP body part is LightVehicleVersionManifest, and the format is shown below.

Table 2-22 LightVehicleVersionManifest format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
signed	-	LightVehicle VersionManifestSigned	-	-	Referred to Table 2-23.
signatures	-	Signature[]	-	-	Referred to Table 2-6.

Table 2-23 LightVehicle VersionManifestSigned format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
vin	•	String	-	-	VIN of the vehicle.
primaryld	1	String	-	-	Unique identifier of the primary ECU. (e.g. serial number)
ecuVersionManifest s	-	ECUVersionManifest[]	1	-	Referred to Table 2-24. ECU detailed information.
augmentedManifest	-	AugmentedManifest	-	-	Referred to Table 2-27.
clientDigest		String	-	255 character	Client-generated digest of its current configuration information. The digest should not change unless the vehicle's information has changed. For example, time moving forward should not cause the clientDigest to change.

#### Table 2-24 ECUVersionManifest format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
activeTarget	-	TargetBank	-	-	TargetBank information for the ECU memory bank that is currently the active bank.
targetId	-	String	1 character	255 character	Unique address of the ECU with the Vehicle address space (e.g. CAN/Ethernet Interface + address).

### Table 2-25 TargetBank format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
bank	"A"	String	-	-	For dual bank ECUs, this attribute indicates the ecu memory bank.
softwareDetails	-	SoftwareDetail[]	1	100 character	An array of softwareDetail associated with the ECU.
hwld	-	String	-	255 character	The hardware ID or part number of the ECU.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	79/152
	otasu40-centerconnect-rd000-0012-a	

### Table 2-26 SoftwareDetail format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
subTargetId	1	String	1 character	255 character	Logical identifier of the software component within the ECU.
productNumber	1	String	1 character	1024 character	Identifier of the software and parameters running on the software component.

## Table 2-27 AugmentedManifest format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
timeStamp	-	String	-	-	Unix epoch seconds. This timestamp should never go backwards and will be used for ordering the sequence of client reported requests/events on the backend.
packageStorage	-	PackageStrage	-	-	Referred to Table 2-21. PackageStorage area information.
lastUpdateCamp aignId		Number	0	2147483647	Identifier of the last OTA campaign that caused the vehicle to update to its current configuration. Mandatory if the "Attempt ID" is specified to identify which time of campaign application if same campaign was matched and completed by the vehicle. A vehicle populates 0 for last update Campaign ID in a case where any OTA campaign has not been applied yet. NOTE: It is assumed that vehicle do not update the "Last Update Campaign ID" and the "Attempt ID" even when the Vehicle Configuration was modified other than OTA Campaign application. Ex. wired reprogram by Dealer.
rxswin	-	String[]	-	255 character	An array of type certifications(rxswins) reported by the vehicle. Maximum size of array 2147483647
uploadReason	-	String	1 character	255 character	Indicates the reason the Client sent this essage. Possible values: -Unknown ("0") - Other than below (e.g. a case where a vehicle needs to send Config Check Request or Sync Check Request after getting user acceptance of campaign application or after getting user acceptance of file download, a case where

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	80/152

## 2.1.8. Vehicle configuration information upload response (C\_04\_Res, C\_05\_Res)

This message is HTTP (POST) format, HTTP body part is VehicleVersionManifestResponse, and the format is shown below.

Table 2-28 VehicleVersionManifestResponse format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
targetsMetadata	-	TargetsMetadataAndFile[ ]	-	-	Referred to Table 2-30. Applicable to Director Targets Metadata.
snapshotMetadata	-	CommonMetadata	-	-	Referred to Table 2-30. Applicable to Director Snapshot Metadata.
timestampMetadata	-	CommonMetadata	-	-	Referred to Table 2-30. Applicable to Director Timestamp Metadata.
augmentedMetadata	-	CommonMetadata	-	-	Referred to Table 2-30. Applicable to Augmented Metadata.

### Table 2-29 TargetsMetadataAndFile format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
fileName	-	String	-	-	name of the targets metadata file.
metadata	-	CommonMetadata	-	-	Referred to Table 2-30.

### Table 2-30 CommonMetadata format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
signed	-	SignedMetadata	-	-	Referred to Table 2-31.
signatures	-	Signature[]	-	-	Signatures of the signed sections. If uptane is disabled, this will be an empty array.

### Table 2-31 SignedMetadata format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
type		ENUM(String)			Refer to the Role Types
					section for allowed
					values.
expire		Number			Represents the date and
					time in UTC seconds
					encoded as a UNIX
					timestamp.
version		Number			Version of the metadata.
body	-	Referred to explanation	-	-	The data part of each
		column			metadata is set.
					TargetsMetadata : Table
					2-32.
					SnapshotMetadata :
					Table 2-37.
					TimestampMetadata :
					Table 2-39.
					AugmentedMetadata :
					Table 2-40.

	otasu40-centerconnect-rd000-0042-a	

### example) For augumentmetadata.

### Table 2-32 TargetsMetadata format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
targets	-	TargetAndCustom[]	-	-	Referred to Table 2-33.
bins	-	Bin[]	-	-	Referred to Table 2-34.

### Table 2-33 TargetAndCustom format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
target	-	Target	-	-	Referred to Table 2-35.
custom		Custom	-	-	Referred to Table 2-36

#### Table 2-34 Bin format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
ld	-	Number	-	-	No setting required.
version	-	Number	-	-	No setting required.

### Table 2-35 Target format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
fileName	-	String	-	240 character	File Name. Prepended with relative path: •For files extracted from the Vehicle Software Package Archive (VSPA), Path is relative to the root of the VSPA. • For Repro Policy Metadata file and Download Metadata file, path is not applicable in fileName.
length	-	Number	-	-	File Length. For encrypted repro policy and download metadata, this attribute will indicate the compressed encrypted

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書		
	otasu40-centerconnect-rd000-0012-a		1

Item	Set value	Data type	Minimum value	Maximum value	Explanation
					file size. For unencrypted repro policy and download metadata, this attribute will indicate the compressed decrypted file size.
hashes	-	Hash[]	-	-	Referred to Table 2-7. (*1)
fileDownloadUrl	-	String	-	2048 character	URL to download the file

<sup>(\*1)</sup> Target for conversion to Hash is the file specified by fileName.

#### Table 2-36 Custom format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
softwarePackageId	-	Number	-	•	Identifier of the Software Package. This custom property is set to identify the Software Package for file present in target.

#### Table 2-37 SnapshotMetadata format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
snapshotMetadataFi les	-	SnapshotMetadataFiles[]	-	-	Referred to Table 2-38.

### Table 2-38 SnapshotMetadataFiles format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
filename	-	String	-	240 character	TargetsMetadata file
					name.
version	-	Number	-	-	TargetsMetadata file
					version.

#### Table 2-39 TimestampMetadata format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
filename	-	String	•	240 character	Snapshot file name.
version	•	Number	ı	ı	Snapshot file version.
length	•	Number	ı	ı	Snapshot file length.
hashes	•	Hash[]	•	•	Referred to Table 2-7. (*1)

(\*1) This parameter stores hash value of Snapshot Metadata acquired at the same timing.

Target of hashing corresponds to the bold part of "snapshotMetadata": {...} received in json format.

Examples are given below. The part in bold is target of hashing. Note that parentheses are also included.

```
"snapshotMetadata": {
    "signatures": [],
    "signed": {
        "body": {
            "snapshotMetadataFiles": [{
                 "fileName": "targets.json",
                 "version": 1648833472
        }]
        },
        "expires": 1648919872,
        "type": "snapshot",
        "version": 1648833472
    }
}
```

Table 2-40 AugmentedMetadata format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
campaigns	-	Campaing[]	-	•	Referred to Table 2-41.
subscriptionInfo	-	SubscriptionInfo	-	-	Referred to Table 2-44.
status	"OTA_DISABLE D", "RE_SYNC", "STALE_REQU EST", "NON_STD_CO NFIG", "NO_UPDATE", "UPDATE"	String	-	•	{OTA_DISABLED, RE_SYNC, STALE_REQUEST, NON_STD_CONFIG, NO_UPDATE, UPDATE} Note: Only version 2.0 of Sync Check response can use RE_SYNC.
selectedCampaign	-	SelectedCampaign	-	-	Referred to Table 2-45.

Table 2-41 Campaign format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
campaignId	-	Number	1	-	Campaign id corresponding to the transition that resulted in this update.
campaignType	"OTA", "INFORMATION AL"	String	-	-	The type of campaign {OTA, INFORMATIONAL}
campaignKind	"MARKET","YAR D","OTHERS"	String	-	-	{MARKET, YARD, OTHERS}
hmiInformarion	-	HmiInformation	-	-	Referred to Table 2-42. In-vehicle HMI Display

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書

					information

### **Table 2-42 Hmilnformation format**

Item	Set value	Data type	Minimum value	Maximum value	Explanation
hmiMesssage	-	HmiMessage	-	-	Referred to Table 2-43. In-vehicle HMI file information
requestedLocale	-	String	-	-	Requested locale for the HMI Messages and optional HMI Archive Information. The HMI Message Information and List of HMI Archive Information will be in this locale unless HMI Locale Information error code is populated.
defaultLocale	-	String	-	-	default locale specified for the Campaign.  If default locale is not set for the campaign empty string "" will be returned.

## Table 2-43 HmiMessage format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
reportId	-	String	-	-	
url	-	String	-	2048 character	message file url.
length	-	Number	-	1	Size of the file downloaded.
digest	-	String	-	1	HMI message digest (*1)
digestAlgorithm	-	String			Algorithm used to generate the digest. Algorithm supported by SDP: SHA256
decompressedLengt h	-	Number	-	-	Size of the decompressed file. It will set to 0 for hmiMessage attribute of HMIInformation and for non zip collective hmi file.

<sup>(\*1)</sup> Target of hashing is the file specified by url.

Table 2-44 SubscriptionInfo format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
otaEnabled	-	Boolean	-	-	Indicates whether OTA is enabled if true otherwise it's disabled.
statusCheckInterval	-	Number	0	777600	Specifies non-negative interval between configuration status check-ins. Value is in seconds. A value of zero indicates the vehicle should check-in at each ignition on.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	87/152

Item	Set value	Data type	Minimum value	Maximum value	Explanation
preCondition	-	String	-	-	Preconditions Referred to below for details.
displayMode	"MANDATORY", "CONDITIONAL"	String	-	-	{MANDATORY, CONDITIONAL}
value	-	Number	-	-	The value will be present if the condition has associated value.

### Table 2-54 PreCondition details

Information type	preCondition	displayMode	Value	Content
Confirmation of forced acceptance	ForceConfirmationOfConsent	"MANDATORY"	0 : Invalid 1 : Availability	In the case of (If there is no item, it is agreed to be "invalid") campaigns for which this setting is availability, with or without prior approval, it is necessary to obtain campaign adaptation approval confirmation in In-vehicle HMI or External HMI.
Forced Wi-Fi delivery	ForceWiFiConnect	"MANDATORY"	0 : Invalid 1 : Availability	In the case of (If there is no item, it is agreed to be "invalid") campaigns for which this setting is availability, vehicle needs to perform OTA only during Wi-Fi communication.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	91/152
	otasu40-centerconnect-rd000-0042-a	

\*) Campaign information shows the following configuration image below.

If there are multiple application targets campaign, multiple campaign formats are set. The information specified in campaign format is part, details are set in selectedCampaign. This is for one campaign. The campaign set in selectedCampaign will be the information of the campaign specified in preferrencedCampaingId of campaign #1 or Vehicle configuration information digest (C\_04\_Req), Vehicle configuration information upload (C\_05\_Req).

If you want to change the information of selectedCampaign, you can acquire the information of the specified campaign by specifying preferrencedCampaingId of Vehicle configuration information digest (C\_04\_Req), Vehicle configuration information upload (C\_05\_Req) again and sending it.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	92/152
	otasu40-centerconnect-rd000-0042-a	

## 2.1.9. HMI Data acquisition (C\_08\_Req)

This message is HTTP (GET) format, acquire the file. The format of HTTP body part is not specified. Acquire from the URL specified in 2.1.8 Vehicle configuration information upload response (C\_04\_Res, C\_05\_Res).

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	93/152
	otasu40-centerconnect-rd000-0042-a	

## 2.1.10. Download tracking notification (C\_09\_Req)

This message is HTTP (POST) format, HTTP body part is the same as "HTTP format (Common)",

"VsmDeviceEvents format (Common)" up to Table 2-3, Table 2-4.

VsmEvents and later are shown below.

Table 2-55 VsmEvents format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
eventsUuid	-	String	32 character	32 character	Unique identifier for the event. Ideally, the source device has a good time source and unique MAC address to utilize a Version 1 UUID.  Alternately, if the source doesn't have a unique MAC address, or it doesn't have an accurate RTC time source, it should utilize a version 4 UUID assuming it has a secure, true random number generator.
eventsType	"tracking"	String	12 character	12 character	rmState: a notification of the client's current state notification: a notification of 'available updates' has been presented to the user download: a VSM element is being (or has been) downloaded to the phone or to the head unit, from either SDP or phone installation: a VSM element is being (or has been) installed, either successfully or not activate: Event related to installed software being activated. Status can be one of "accepted", "declined", "postponed", "success" or "failure" syncComplete: Synchronization has been completed. Currently allowed values are "success" and "failure". ackinstall: Status is either "accepted" or "skipped". The user isn't provided any choice other than to acknowledge the result oemError: Only one possible status "failure". The Tier1 reported a general error with ECU specific error codes tracking: Notification that download of a file was completed. UpdateComplete: Notification that campaign update was successful. Only possible

Item	Set value	Data type	Minimum value	Maximum value	Explanation
			value	value	status values are "success" and "failure". If this value is not valid, it will result in unexpected behavior on helpdesk and dashboard.
eventMode	"active"	String	6 character	6 character	"active" or "passive". Note event mode for activation should always be "active" per Jaspar
trackingExtras	-	trackingExtras	-	-	Referred to Table 2-56. Tracking notification details.
currentTime	-	TimeMs	-	-	Referred to Table 2-10. Event date and time.
status	"success"	String	7 character	7 character	Fixed.
attemptId	-	String		255 character	A unique ID used to distinguish repeated updates of the same campaignId on the same device. SDP will not reject the request if attemptId is not present but it will result in unexpected behavior on helpdesk and dashboard.  Note: the "attemptId" is required for notifications which requires to include campaign ID, if vehicle doesn't send attemptId properties for those notifications, SDP Dashboard and Helpdesk behavior will be unpredictable. When vehicle applying the same campaign multiple times, set an unique ID (n-th time of campaign application) within the same campaign at the vehicle side in order to completely distinguish the notifications for each campaign application. Vehicles are assumed the "attemptId" to be retained the initial value as String: "0000" (ASCII 0x30 0x30 0x30) 0x30). The "attemptId" do not allow "empty characters" and "strings consisting of only whitespace characters" as values.
reportId	-	String	-	-	

## Table 2-56 trackingExtras format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
fileId	-	String	1 character	32 byte	ID that uniquely identifies the file.
fileSize	-	Number	8 byte	8 byte	size of the file in bytes.
dlTime	-	TimeMS	-	_	Data/Time (UTC) that the download was completed

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	95/152
_	otasu40-centerconnect-rd000-0042-a	

Item	Set value	Data type	Minimum value	Maximum value	Explanation
transportType	"cellular","wifi"	String	-	-	The expected communication method used to send the notification. Possible Values: "cellular", "wifi", "external memory", "bluetooth", "other".
result	"success", "cancel", "error"	String	-	-	Result of the download, possible values: "success", "cancel", "error"

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	96/152
	otasu40-centerconnect-rd000-0042-a	

## 2.1.11. User Acceptance Result Notification (C\_10\_Req)

This message is HTTP (POST) format, HTTP body part is the same as "HTTP format (Common)",

"VsmDeviceEvents format (Common)" up to Table 2-3, Table 2-4.

VsmEvents and later are shown below.

Table 2-57 VsmEvents format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
eventsUuid	-	String	32 character	32 character	Unique identifier for the event. Ideally, the source device has a good time source and unique MAC address to utilize a Version 1 UUID.  Alternately, if the source doesn't have a unique MAC address, or it doesn't have an accurate RTC time source, it should utilize a version 4 UUID assuming it has a secure, true random number generator.
eventsType	"notification"	String	12 character	12 character	rmState: a notification of the client's current state notification: a notification of 'available updates' has been presented to the user download: a VSM element is being (or has been) downloaded to the phone or to the head unit, from either SDP or phone installation: a VSM element is being (or has been) installed, either successfully or not activate: Event related to installed software being activated. #### 2.1.32. Center error notification (C\_29\_Res)

This message is HTTP (POST) format, HTTP body part is ErrorCode, and the format is shown below.

Table 2-94 ErrorCode format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
code	-	Number	-	-	Error number Referred to 2.2.2.
description	-	String	-	-	A Human friendly description of the error code.

#### 2.1.33. Newer version confirmation (Director Root Metadata) (C\_30\_Req)

This message is HTTP (GET) format, acquire file. The format of HTTP body part is not specified.

Let "https://{FQDN of CDN server}/uptane/director/{Version information}.root.json" be the acquisition URL.

For {Version information}, set the version of Director Root Metadata saved in the vehicle incremented by 1.

The format of Direct Root Metadata is "CommonMetadata" (referred to Table 2-30).

The format of "body" in "SignedMetadata" is as follows. △1

Table 2-95 RootMetadata format △1

Item	Set value	Data type	Minimum value	Maximum value	Explanation
keys	•	PublicKey[]	-	-	public keys of the top level roles.
roles	-	TopLevelRole[]	-	-	role information corresponding to each supported role type

Table 2-96 PublicKey format △1

Item	Set value	Data type	Minimum value	Maximum value	Explanation
publicKeyld	-	String	64 character	64 character	Public key ID which is necessary for signature verification. (*1)
publicKeyType	"ECDSA"	String	5 character	5 character	Public key types (RSA/ECDSA).
publicKeyValue	-	String	-	-	Base16 encoding of the DER encoded X.509 public key value. Lowercase characters should be used.

(\*1) The ID is a value obtained by calculating the digest of the private key for signature generation with SHA256 and encoding the result with Base16.

Table 2-97 TopLevelRole format △1

Item	Set value	Data type	Minimum value	Maximum value	Explanation
role	-	ENUM(String)	-	-	role type {root, targets, snapshot, timestamp}
keylds	-	String[]	-	-	keyids corresponding to the role
threshold	"1"	Number	-	-	number of keys required

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	143/152

Item	Set value	Data type	Minimum value	Maximum value	Explanation
					to sign the metadata file.

#### 2.1.34. Newer version confirmation (Image Root Metadata) (C\_31\_Req)

This message is HTTP (GET) format, acquire file. The format of HTTP body part is not specified.

Let "https://{FQDN of CDN server}/uptane/image/{Version information}.root.json" be the acquisition URL.

For {Version information}, set the version of Image Root Metadata saved in the vehicle incremented by 1.

The format of Image Root Metadata is the same as Director Root Metadata(referred to 2.1.34 Newer version confirmation (Image Root Metadata) (C 31 Req)).

#### 2.1.35. Image Snapshot Metadata Download request (C\_32\_Req)

This message is HTTP (GET) format, acquire file. The format of HTTP body part is not specified.

Let "https://{FQDN of CDN server}/uptane/image/{Version information}.snapshot.json" be the acquisition URL.

In addition, set the value of signed.body.version of Image Timestamp Metadata downloaded immediately before to {Version information}.

The format of Image Snapshot Metadata is the same as "snapshotMetadata" in "Table 2-28

VehicleVersionManifestResponse format". △1

#### 2.1.36. Image Timestamp Metadata Download request (C 33 Reg)

This message is HTTP (GET) format, acquire file. The format of HTTP body part is not specified.

Let "https://{FQDN of CDN server}/uptane/image/timestamp.json" be the acquisition URL.

The format of Image Timestamp Metadata is the same as "timestampMetadata" in "Table 2-28

VehicleVersionManifestResponse format". △1

#### 2.1.37. Image Targets Metadata Download request (C 34 Req) △1

This message is HTTP (GET) format, acquire file. The format of HTTP body part is not specified.

Let "https://{FQDN of CDN server}/uptane/image/{Version information}.targets.json" be the acquisition URL.

In addition, set the value of signed.body.snapshotMetadataFiles[0].version of Image Snapshot Metadata downloaded immediately before to {Version information}.

The format of Image Targets Metadata is the same as "targetsMetadata" in "Table 2-28

VehicleVersionManifestResponse format". △1

#### 2.1.40. Repro policy META Data acquisition (C\_06\_Req)

This message is HTTP (GET) format, acquire file. The format of HTTP body part is not specified. Acquire from the URL specified in 2.1.8 Vehicle configuration information upload response (C\_04\_Res, C\_05\_Res).

(In 19PFver3, Repro policy META Data is included in SoftwarePackage, so no action is required.)  $\triangle 1$ 

## 2.1.41. Download META Data acquisition (C\_07\_Req)

This message is HTTP (GET) format, acquire file. The format of HTTP body part is not specified. Acquire from the URL specified in 2.1.8 Vehicle configuration information upload response (C\_04\_Res, C\_05\_Res).

(In 19PFver3, Download META Data is included in SoftwarePackage, so no action is required.) △1

#### 2.1.42. Vehicle Log Upload URL Acquisition (C\_37\_Req)

This message is HTTP (POST) format, HTTP body part is MultiPartInitiateUploadRequest Common Request Metadata, and the format is shown below. △1

Table 2-103 Common Request Metadata format △1

Item	Set value	Data type	Minimum value	Maximum value	Explanation
signed	-	MultiPartInitiateUploadR equest	•	•	Referred to Table 2-104.
signatures	-	Signature[]	-	-	Referred to Table 2-6.

Table 2-104 MultiPartInitiateUploadRequest format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
vin	-	String	17	17	VIN of the vehicle.
primaryld	-	String	-	-	Unique identifier of the primary ECU (e.g. serial number).
currentTime	-	Number	-	-	Represents the current date and time in UTC seconds encoded as a UNIX timestamp
uploadTrigger	-	String	-	-	Trigger for vehicle to upload log. ex :From OTA Center, "ota center". From vehicle, "vehicle".
campaignId	-	Number	-	-	Campaign identifier associated with the content of the log.
errorCode	-	Number	-	-	
uploadParts	-	UploadPart[]	-		Referred to Table 2-105 UploadPart format.
beginTime	-	String	-	-	Begin time of the log. UTC, Format "yyyyMM- dd'T'HH:mm:ssZ". Example 2014-03- 22T13:10:19Z Note: If begin time

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	147/152

otasu40-centerconnect-rd000-0042-a

Item	Set value	Data type	Minimum value	Maximum value	Explanation
					cannot be parsed, it is being ignored, and treated as null.
endTime	-	String	-	-	End time of the log. UTC, Format "yyyyMM- dd'T'HH:mm:ssZ". Example 2014-03- 22T13:10:19Z Note: If end time cannot be parsed, it is being ignored, and treated as null
category	log	String	-	-	Supported Categories: Log
transportType	-	String	-	-	The data connection type the client is using to send the Data Collection message to OTAmatic SDP. Valid values: "cellular", "wifi", "external memory", "bluetooth", "other"
fileName	-	String	-	-	Name of the file to be uploaded Allowed characters for filename: 0-9, a-z, A-Z, "-", ".", "" Max length: 240

## Table 2-105 UploadPart format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
partNumber	-	Number	1	10000	A part number uniquely identifies a part and also defines its position within the object being created. Part numbers can vary between 1 and 10000 inclusive.
md5CheckSum	-	String	-	-	The base64-encoded 128-bit MD5 digest of the part data. checksum will be used in computing the signed url thus limiting clients to only the intended part. This will be used as a message integrity check in the Upload Part API to verify that the part data is the same data that was originally sent.

# 2.1.43. Vehicle Log Upload URL Acquisition response (C\_37\_Res)

Regarding this message, the information required in 2.1.44 Vehicle Log Upload (C\_38\_Req) is returned in the response from OTA Center, so the response data is described.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書

uploadParts	-	UploadPart[]	-	-	

#### Table 2-107 UploadPart format (Response)

Item	Set value	Data type	Minimum value	Maximum value	Explanation
partNumber	-	Number	1	10000	A part number uniquely identifies a part and also defines its position within the object being created.
md5CheckSum	-	String	-	-	MD5 Check sum of the part.
uploadURL	-	String	-	2048	Signed URL corresponding to this part, using which client would have to upload the part contents.

#### 2.1.44. Vehicle Log Upload (C\_38\_Req)

This message is HTTP (PUT) format, file upload using file upload API of AWS S3 (reference).

Acquire from the URL specified by-0 2.1.42 Vehicle Log Upload URL Acquisition (C\_37\_Req). File upload to every partNumber defined in Table 2-105Table 2-105 UploadPart format. In addition, add Content-MD5 to HTTP header and request using the value entered in md5CheckSum defined in Table 2-105. △1

#### 2.1.45. Vehicle Log Upload response (C\_38\_Res)

There is no format definition for this message. However, the information required by 2.1.46 Vehicle Log Upload Completion Notice (C\_39\_Req) is returned from OTA Center in the response, so an example of the response is described.

#### Table 2-108 (Response example)

#### 2.1.46. Vehicle Log Upload Completion Notice (C\_39\_Req)

This message is HTTP (POST) format, HTTP body part is MultiPartCompleteUploadRequest Common Request Metadata, and the format is shown below. △1

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	149/152
	otasu40-centerconnect-rd000-0042-a	

## Table 2-109 Common Request Metadata format $\triangle$ 1

Item	Set value	Data type	Minimum value	Maximum value	Explanation
signed	-	MultiPartInitiateUploadR equest	-	-	Referred to Table 2-110.
signatures	-	Signature[]	-	-	Referred to Table 2-6.

# Table 2-110 MultiPartCompleteUploadRequest format

Item	Set value	Data type	Minimum value	Maximum value	ExplanaReferred totion
vin	-	String	17	17	VIN of the vehicle
primaryld	-	String	-	-	Unique identifier of the primary ECU (e.g. serial number).
currentTime	-	Number	-	-	Represents the current date and time in UTC seconds encoded as a UNIX timestamp.
uploadContext	-	String	-	-	Enter the value acquired in 2.1.43.
partETags	•	PartETag[]	-	-	Referred to Table 2-111 PartETag format.

# Table 2-111 PartETag format

Item	Set value	Data type	Minimum value	Maximum value	Explanation
partNumber	-	Number	1	10000	A part number uniquely identifies a part and defines its position within the object being created. Min: 1, Max: 10000
etag	-	String	-	-	Use the value entered in the response header of 2.1.44 Vehicle Log Upload (C_38_Req).

	otasu40-centerconnect-rd000-0042-a	

## 2.2. Response cord

# 2.2.1. HTTP response cord

HTTP Code	Explanation
200	Processed successfully
201	Created
204	Processed successfully, no content in response
304	Not Modified
400	Bad Request. The request could not be understood by the server due to malformed syntax. The client SHOULD NOT repeat the request without modifications.
401	Unauthorized (requires user authentication)
403	Forbidden (not allowed regardless of authentication)
404	The server has not found anything matching the Request-URI
406	Not acceptable (the server cannot supply a response that satisfies the request's Accept header)
415	Unsupported media-type (the server cannot process the media-type specified by the request's Content-Type header)
503	Service Unavailable. The server is unable to process requests at the current time.  May also include a 'Retry-After' header with the number of seconds the client should wait before making subsequent requests.

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	151/152
	otasu40-centerconnect-rd000-0042-a	

#### 2.2.2. Error notification code

HTTP Code	OEM Error Code	Explanation
403	1112	Forbidden
503	1113	Service unavailable
400	30001	Bad request
500	30002	Internal server error
400	30003	Invalid request data
404	30007	Resource not found
415	30008	Unsupported media type
406	30009	Not acceptable
400	30010	File too large
400	30012	Request is missing mandatory data
400	30013	No file attached or file is empty
400	44004	Signature verification failed
400	30003	Invalid request data

#### 2.3. Communication path protection

- As protection of the communication network, if Master ECU outside the car communication is opposed to TSC, communication between OTA Center ~ Master ECU should realize mTLS communication. If outside the car communication opposition is CDN, OTA Center ~ Master ECU communication must be realized between TLS.
- Server certification / client certification shall process according to the standard sequence of TLS version 1.3.
- If Master ECU outside the car communication opposition is TSC, then cipher suite shall communicate using
  one of the ciphersuites defined in the references depending on ECU, which is applicable to Master ECU.
   (References) CCOM Communication Spec (not issued for 19PFv3), HUCOM Communication Spec. △1
- ・ If Master ECU outside the car communication opposition is not TSC, the cipher suite shall use.

  TLS\_AES\_128\_GCM\_SHA256, TLS\_AES\_256\_GCM\_SHA384

  (At 19PFv3, use the "190\_AppendixA\_ECU 独自のサイバーセキュリティ要求仕様書" designated cipher suite.) △1

#### 2.4. 【Reference】 Signature generation / verification flow

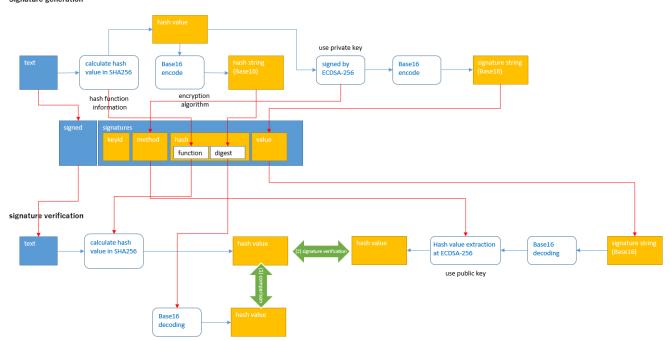

Complements the signature generation / verification flow. Generally, when adding a signature, hash value is used for the message to be signed to create hash function, the value is encrypted with a private key, digital signature is added to the message, and sent to the other party.

In the flow of T-OTA4.0, this hash value and digital signature are sent to the other party, but before sending these values to Base16 encode, the converted character string must be sent to the other party. The figure shows the signature verification flow for hash function "SHA-256", encryption algorithm "ECDSA-256".

要求仕様書	OTA4.0 センタ—マスタ間 I/F 仕様書	152/152
	otasu40-centerconnect-rd000-0012-a	

Signature generation / verification flow

Signature generation

The signature verification flow describes the 2 steps of verification

- (1). A comparison of the received hash value and the hash value created using hash function for the received message.
- (2). Comparison of hash value created in (1) and hash value extracted from the received signature string. However, since (2) includes the comparison processing of (1), the comparison of (1) can be arbitrary. Also, in the figure, hash value is compared as an example of signature verification, but it is also possible to encode character strings in Base16 and compare them.
